Sum of Number of Records and date_stolen Weekday broken down by weekday. The view is filtered on weekday, which has multiple members selected.

This chart compares vehicle theft activity across the days of the week, highlighting Mondays as the peak theft day and Saturdays as the least active.

Vehicle Theft Patterns Across Regions

This stacked bar chart compares vehicle theft patterns across the top regions in New Zealand while displaying all vehicle categories in the dataset. The analysis shows that Stationwagon vehicles were the most frequently stolen vehicle type, whereas Articulated Trucks and Special Purpose Vehicles were among the least frequently stolen categories. The chart also highlights regional differences in theft patterns, with Auckland recording the highest theft counts across most vehicle types.

Average Vehicle Age

This bar chart illustrates the average age of stolen vehicles across different vehicle categories in New Zealand. The analysis shows that Special Purpose Vehicles recorded the highest average vehicle age, indicating they are typically older vehicles, while Mobile Machines and Mopeds were among the newest stolen vehicle categories. The findings also reveal noticeable variations in average vehicle age across different vehicle types.

Vehicle Theft Volume and Vehicle Type Distribution by Region

This stacked bar chart compares vehicle theft volumes across regions in New Zealand while illustrating the distribution of the top five most frequently stolen vehicle types within each region. The analysis identifies Auckland as the region with the highest number of stolen vehicles, while regions such as Southland recorded comparatively lower theft volumes. The visualization also highlights regional differences in the types of vehicles most commonly stolen.

Analysis of Vehicle Theft Trends in New Zealand

Group 6

Prepared by:

- Divine Monye
- Ruth Agi
- Ijeoma

Presented by:

Ruth Agi

This project analyzes stolen vehicle trends across New Zealand using data from the New Zealand Police Department's Vehicle of Interest Database. The analysis focuses on identifying theft patterns based on vehicle types, days of occurrence, vehicle age, and regional distribution. The objective is to uncover insights that can support crime prevention strategies and improve law enforcement resource allocation.

Preventive measures

- Encourage vehicle owners to install anti-theft devices such as steering locks, immobilizers, alarms, and GPS tracking systems.
- Promote public awareness campaigns on vehicle safety practices, including secure parking and avoiding leaving valuables inside vehicles.
- Improve security measures in parking facilities, residential areas, and commercial centers through better lighting and surveillance.
- Encourage owners of older vehicles to upgrade or reinforce security systems, as older vehicles appear more vulnerable to theft.
- Increase community engagement programs that educate the public on theft prevention and reporting suspicious activities promptly.
